## DCS-20 DPF Cleaning System

Part Number: DCS-20

The Carbon Clean DCS-20 DPF Cleaning System is a heavy-duty commercial solution designed to clean DPFs, DOCs, SCR's and Catalysts across a wide range of vehicle and machinery types. Whether you work with cars, vans, HGVs, agricultural equipment, plant machinery or marine applications, the DCS-20 gives you a powerful in-house cleaning system that helps restore performance, reduce replacement costs and create a valuable additional revenue stream.

**Clean deeper. Prove the result. Turn jobs around faster.**

The DCS-20 is engineered to remove up to 100% of soot, ash and carbon, helping blocked filters perform properly again without the cost of replacement. Its triple-filtration system with 1-micron filtration is designed to deliver exceptional cleaning results, while before-and-after differential pressure testing provides measurable proof of performance. With an integrated printer, you can hand customers a clear record of the results right there.

To keep your workflow moving, the system also features a high-powered blower motor and heater for drying, helping you complete jobs faster and improve workshop efficiency.

**Built for commercial use**

The DCS-20 is made for demanding workshop environments. It features a stainless steel body with powder-coated protection, a large enclosed cabinet, industrial wheels for easy movement, and a top hatch for longer exhaust systems, allowing you to process larger units without cutting them down. With a 300-litre onboard water tank and single-phase power requirement, it is practical to install and flexible to position, with no permanent water connection required.

**Flexible operation with powerful cleaning performance**

With manual and automatic operating modes, a high-powered water pump, and a pneumatic pulsator with 3 x 20-litre air tanks, the DCS-20 gives operators the control and cleaning strength needed for a wide range of filter conditions. Added features such as LED lighting, clear display controls, low-water alarm, and emergency stop support ease of use, safety, and reliable day-to-day performance.

**Key benefits**

- Restore filter performance with deep cleaning that removes soot, ash and carbon
- Reduce replacement costs by cleaning rather than replacing blocked units
- Expand your service offering across automotive, commercial, agricultural, plant and marine sectors
- Increase workshop revenue with a profitable in-house cleaning service
- Improve turnaround times with integrated drying capability
- Handle a wider range of jobs with support for longer exhaust systems and multiple filter types
- Install easily with single-phase power and no permanent water connection needed

**Why choose the Carbon Clean DCS-20?**

If you need a commercial DPF cleaning machine that delivers professional results, supports a broad range of applications and helps generate real return on investment, the Carbon Clean DCS-20 is built to do exactly that.

**Commercial DPF cleaning power built for serious workshops**
